AMENDMENTS TO THE CLAIMS

Please amend claim 80 as indicated below.

1-54. (Cancelled)

- 55. (Previously Presented) An integrated computer system for planning for implementing and administering a retirement benefit program including at least one guaranteed life-dependent retirement benefit to provide a guaranteed lifetime income to at least one person using at least one or more personal financial assets owned by the person, the integrated computer system comprising:
- (a) at least one server operatively coupled to a network to establish a data communications link with at least one remote client computer operatively connected to the network, the server being adapted to store information received from at least the remote client computer necessary to plan for, implement and administer the retirement benefit program and being further adapted to provide information related to the person's retirement benefit program to at least the remote client computer;
- (b) the server including at least one controller adapted for performing operations of the integrated computer system, the controller being operatively coupled to storage means for storing financial and statistical information and retirement benefit program information necessary to at least calculate current and future values of (i) asset vehicles, including one or more personal financial assets owned by the person, (ii) one or more guaranteed life-dependent retirement benefits selected by the person, and (iii) benefit payments to the person, the controller being operatively coupled to an allocation component to provide at least allocation instructions to the allocation component;
- (c) the allocation component being adapted to execute at selected intervals of an allocation period in accordance with at least a first set of instructions an allocation of a portion of funds corresponding to at least one asset vehicle containing one or more personal financial assets owned by the person towards purchasing one or more fractions of at least a first guaranteed life-dependent retirement benefit that provides one or more income benefit payments to the person to thereby gradually purchase the first retirement benefit during the allocation period while allowing a remainder of the funds corresponding to the asset vehicle to generate

by the person investment returns, the first set of allocation instructions including at least information specified

- remainder of at least the first guaranteed life-dependent retirement benefit, executing an allocation of funds corresponding to the total current value towards purchasing a based on an individual, personal actuarial valuation of the benefit and a market value of the asset the person if the allocation component immediately accelerates the allocation period by vehicle, and (ii) a target benefit payment value representative of a benefit payment available to value representative of a sum of a current value of the first retirement benefit purchased to date the controller being adapted to calculate as of a current date: (i) a total current
- of the allocation period to at least the remote client computer for consideration by the person; current date, and the total current values and the target benefit payment values of future intervals financial and statistical information related to future market performance, inflation and interest value and (ii) a target benefit payment, employing at least relevant portions of the stored the server providing the total current value and the target benefit payment value as of the and to calculate for each future interval of the allocation period: (i) a total current
- computer for consideration by the person; and payment value based on at least change information received from at least the remote client allocation period a recalculated total current value and a recalculated target benefit benefit payment values of future intervals of the allocation period to at least the remote client person, the server providing the recalculated total current values and the recalculated target computer including at least one change to the retirement benefit program specified by the the controller being further adapted to recalculate for each future interval of the
- payment values in accordance with at least a second set of instructions including at least towards achieving the recalculated total current values and the recalculated target benefit information specified by the person based on the at least one change to the retirement benefit the allocation component being further adapted to alter the allocation of funds
- one of: at least one change to the retirement benefit program specified by the person includes at least (Previously Presented) The integrated computer system of claim 55, wherein the

- at least first guaranteed life-dependent retirement benefit. a change in a length of the allocation period, and (ii) one or more changes in the
- payments from the at least one retirement benefit purchased. server is further adapted to calculate a plurality of benefit payments to the person during and benefit payment being made to the person after expiration of the allocation period comprising payments from the at least one guaranteed life-dependent retirement benefit purchased, and each comprising a sum of a portion of funds from the at least one asset vehicle and one or more the person, each benefit payment being made to the person during the allocation period after the allocation period and to execute payment of each of the plurality of benefit payments to (Previously Presented) The integrated computer system of claim 55, wherein the
- program to calculate the future total current values and the future target benefit payments interest rates, (v) current cost of living indices, and (vi) simulated cost of living indices, including at least one or more person-specified personal choices related to the retirement benefit respectively, and wherein the server is further adapted to employ additional information relevant portions of the stored financial and statistical information include at least one of: historical market returns, (ii) simulated market returns, (iii) current interest rates, (iv) simulated (Previously Presented) The integrated computer system of claim 55, wherein the
- at least one change to the retirement benefit program specified by the person includes at least (Previously Presented) The integrated computer system of claim 55, wherein the
- more personal choices specified by the person related to the retirement benefit program modifications of the at least first guaranteed life-dependent retirement benefit, and (iv) one or of the allocation of funds corresponding to the at least one asset vehicle, (iii) one or more one or more modifications of the allocation period, (ii) one or more modifications
- server is further adapted to process information received from at least the remote client computer related to acceleration of the allocation period to instruct the allocation component to execute an (Previously Presented) The integrated computer system of claim 55, wherein the

purchasing a remainder of the at least first guaranteed life-dependent retirement benefit allocation of at least a portion of funds corresponding to the total current value towards

- plurality of available allocation periods, and wherein the server is further adapted to provide to at gradually purchasing one or more fractions of at least one of a plurality of available guaranteed results of allocations of portions of funds corresponding to the at least one asset vehicle towards program specified by the person, each sample retirement benefit program including simulated specified by the person and (ii) one or more modifications to a sample retirement benefit least the remote client computer the simulated results. life-dependent retirement benefits at one or more selected intervals of the at least one of a sample retirement benefit programs in accordance with at least one of: (i) one or more choices server further includes at least one simulation component adapted to generate a plurality of (Previously Presented) The integrated computer system of claim 55, wherein the
- simulated results include simulated total current values and simulated target benefit payment values for the one or more selected intervals of the at least one available allocation period (Previously Presented) The integrated computer system of claim 61, wherein the
- simulated market performance information, (ii) simulated interest rates, and (iii) simulated simulation component generates the simulated results as a function of at least one of: inflation rates (Previously Presented) The integrated computer system of claim 61, wherein the
- benefit, and wherein the server is adapted to provide the simulated purchase prices to at least the simulation component is further adapted to statistically calculate simulated purchase prices of remote client computer one or more fractions of the at least one available guaranteed, life-dependent retirement (Previously Presented) The integrated computer system of claim 61, wherein the
- by employing information related to simulated interest rates and at least one of: (i) information simulation component is further adapted to statistically calculate the simulated purchase prices (Previously Presented) The integrated computer system of claim 64, wherein the

the person related to projected morbidity of the person; and (ii) information related to projected longevity of

- provide the at least one probability to at least the remote client computer. an expiration of the at least one available allocation period, and wherein the server is adapted to achieving or exceeding the at least one available guaranteed life-dependent retirement benefit at simulation component is further adapted to statistically determine at least one probability of (Previously Presented) The integrated computer system of claim 61, wherein the
- recalculate the simulated results in accordance with the one or more modifications program specified by the person, and wherein the simulation component is further adapted to modifications, and (iii) information related to one or more modifications to the sample benefit or more modifications; (ii) information related to rejection by the person of the one or more computer including at least one of: (i) information related to acceptance by the person of the one server is adapted to receive person-specified information from at least the remote client (Previously Presented) The integrated computer system of claim 61 wherein the
- life-dependent retirement benefit purchased to date. selected intervals of the allocation period an actuarial valuation of the at least first guaranteed server further includes at least one actuarial valuation component adapted to perform for each of (Previously Presented) The integrated computer system of claim 55, wherein the
- value of a remainder of the asset vehicle controller is further adapted to calculate for selected intervals of the allocation period a market (Previously Presented) The integrated computer system of claim 55, wherein the
- personal financial assets owned by the person, (iv) age of the person, and age of the person's allocation periods the person desires, (iii) a risk tolerance of the person, (iv) one or more life-dependent retirement benefits the person desires, (ii) one or more of a plurality of available the person with respect to at least one of: (i) one or more of a plurality of available guaranteed server is further adapted to provide to at least the remote client computer information to query (Previously Presented) The integrated computer system of claim 55, wherein the

one response the person provides in response to the query information toward implementing the retirement benefit program person related to the retirement benefit program, and to process information including at least spouse, if any, (v) health status of the person, and (vi) one or more personal choices of the

- index information towards implementing the retirement benefit program index, (ii) a COLA (CPI-linked) index, and (iii) a market-linked index, and to process the benefit server is adapted to receive from at least the remote client computer information related to benefit, the person-specified benefit index being selected from the group consisting of: (i) a level person-specified benefit index desired for the at least first guaranteed life-dependent retirement (Previously Presented) The integrated computer system of claim 55, wherein the
- retirement benefit program percentage range below and above a benefit payment in order to dampen the volatility in income payments received, and to process the benefit collar information towards implementing the person-specified benefit payment collar, the person-specified benefit collar corresponding to a server is adapted to receive from at least the remote client computer information related to (Previously Presented) The integrated computer system of claim 55, wherein the
- implementing the retirement benefit program a desired low market value, and to process the stop/loss indication information toward allocation period the asset vehicle has reached at least one of: (i) a desired high market value, (ii) a person-defined threshold level the server employs to indicate to the person during the server is adapted to receive from at least the remote client computer information related to a person-specified stop/loss indication, the person-specified stop/loss indication corresponding to (Previously Presented) The integrated computer system of claim 55, wherein the
- at least first guaranteed life-dependent benefit purchased date and for each of future intervals of the allocation period includes actuarial valuations of the current value of the at least first guaranteed life-dependent retirement benefit as of the current (Previously Presented) The integrated computer system of claim 68, wherein the

- plurality of benefit payments to the person. least first guaranteed life-dependent retirement benefit; and (ii) fund at least a portion of the investment returns during the allocation period to at least one of: (i) fund purchases of the at at least one asset vehicle includes one or more investment vehicles configured to generate (Previously Presented) The integrated computer system of claim 55, wherein the
- (ii) a representative of the person, (iii) an advisor of the person. remote client computer includes a remote computer operated by at least one of: (i) the person, (Previously Presented) The integrated computer system of claim 55, wherein the
- remote client computer is operatively connected through the network to at least one computing device operated by the person (Previously Presented) The integrated computer system of claim 55, wherein the
- using at least one or more personal financial assets owned by the person, the integrated computer implementing and administering a retirement benefit program including at least one guaranteed system comprising: life-dependent retirement benefits to provide a guaranteed lifetime income to at least one person (Previously Presented) An integrated computer system for planning for
- to at least the remote client computer; being further adapted to provide information related to the person's retirement benefit program computer necessary to plan for, implement and administer the retirement benefit program and network, the server being adapted to store information received from at least the remote client communications link with at least one remote client computer operatively connected to the at least one server operatively coupled to a network to establish a data
- storing financial and statistical information and retirement benefit program information retirement benefits selected by the person, and (iii) benefit payments to the person, the controller more personal financial assets owned by the person, (ii) one or more guaranteed life-dependent necessary to at least calculate current and future values of (i) asset vehicles, including one or the integrated computer system, the controller being operatively coupled to storage means for the server including at least one controller adapted for performing operations of

simulation component; being operatively coupled to at least one simulation component to provide instructions to the

- least the remote client computer the simulated results for consideration by the person; intervals of at least one of a plurality of available allocation periods, the server providing to at at least one of a plurality of available guaranteed life-dependent retirement benefits at selected more personal financial assets owned by the person towards purchasing one or more fractions of specified by the person, each sample retirement benefit program including simulated results of allocations of portions of funds corresponding to at least one asset vehicle containing one or retirement benefit programs in accordance with one or more retirement benefit program choices the simulation component being adapted to generate a plurality of sample
- (ii) a simulated target benefit payment value representative of a benefit payment available to the allocation period: (i) a simulated total current value representative of a sum of a current value of results to at least the remote client computer for consideration by the person; the available guaranteed life-dependent retirement benefit, the server providing the simulated of funds corresponding to the simulated total current value towards purchasing a remainder of person if the controller immediately accelerates the allocation period by executing an allocation individual, personal actuarial valuation of the benefit and a market value of the asset vehicle, and the available guaranteed life-dependent retirement benefit purchased to date based on an the simulated results including for each of selected intervals of the available
- simulated results for consideration by the person; and client computer including at least one change to the sample retirement benefit program specified current value and the simulated target benefit payment value for each of selected intervals of the by the person, the server providing to at least the remote client computer the recalculated available allocation period based on at least change information received from at least the remote the simulation component being further adapted to recalculate the simulated total
- person for implementation including information identifying at least one sample retirement benefit program selected by the program based on selection information received from at least the remote client computer the controller being adapted to implement at least one actual retirement benefit
- simulation component is further adapted to statistically calculate simulated purchase prices of (Previously Presented) The integrated computer system of claim 78, wherein the

retirement benefit program information. employing at least relevant portions of the stored financial and statistical information and the the one or more fractions of the available guaranteed life-dependent retirement benefit

- lifetime income to at least one person using at least one or more personal financial assets owned including at least one guaranteed, life-dependent retirement benefit to provide a guaranteed eemputes for planning for, implementing and administering a retirement benefit program by the person, the method comprising: (Currently Amended) A method performed at least partially by a programmed
- returns, the first set of allocation instructions including at least information specified by the allowing a remainder of the funds corresponding to the asset vehicle to generate investment gradually purchase the at least first retirement benefit during the allocation period while dependent retirement benefit that provides one or more income benefit payments to the person to owned by the person, towards purchasing one or more fractions of at least a first guaranteed lifecorresponding to at least one asset vehicle, containing one or more personal financial assets period in accordance with at least a first set of instructions an allocation of a portion of funds allocating by use of a computing device and at selected intervals of an allocation
- purchasing a remainder of at least the first guaranteed life-dependent retirement benefit, period by executing an allocation of funds corresponding to the total current value towards available to the person if the programmed computer immediately accelerates the allocation current value representative of a sum of a current value of the first retirement benefit purchased the asset vehicle, and (ii) a target benefit payment value representative of a benefit payment to date based on an individual, personal actuarial valuation of the benefit and a market value of calculating by use of said computing device and as of a current date: (i) a total
- intervals of the allocation period to at least one remote client computer for consideration by the value as of the current date, and the total current values and the target benefit payments of future relevant portions of financial and statistical information related to future market performance, inflation and interest rates, and providing the total current value and the target benefit payment allocation period: (i) a total current value and (ii) a target benefit payment, employing at least calculating by use of said computing device and for each future interval of the

- providing the recalculated total current values and the recalculated target benefit payment values including at least one change to the retirement benefit program specified by the person, and by the person; and of future intervals of the allocation period to at least the remote client computer for consideration value based on at least change information received from at least the remote client computer allocation period a recalculated total current value and a recalculated target benefit payment recalculating by use of said computing device and for each future interval of the
- the person based on the at least one change to the retirement benefit program in accordance with at least a second set of instructions including at least information specified by achieving the recalculated total current values and the recalculated target benefit payment values altering, by use of said computing device, the allocation of funds towards
- more modifications of the allocation of funds corresponding to the at least one asset vehicle, (v) a length of the allocation period, (ii) one or more changes in the at least first guaranteed life-(vi) one or more personal choices specified by the person related to the retirement benefit one or more modifications of the at least first guaranteed life-dependent retirement benefit, and to the retirement benefit program specified by the person includes at least one of: (i) a change in dependent retirement benefit, (iii) one or more modifications of the allocation period, (iv) one or (Previously Presented) The method of claim 80, wherein the at least one change
- benefit purchased after expiration of the allocation period comprising payments from the at least one retirement dependent retirement benefit purchased, and each benefit payment being made to the person at least one asset vehicle and one or more payments from the at least one guaranteed life. payment of each of the plurality of benefit payments to the person, each benefit payment being plurality of benefit payments to the person during and after the allocation period and executing made to the person during the allocation period comprising a sum of a portion of funds from the (Previously Presented) The method of claim 80, further comprising calculating a
- portions of financial and statistical information related to future market performance, inflation (Previously Presented) The method of claim 80, wherein the at least relevant

choices related to the retirement benefit program to calculate the future total current values and to employ additional information including at least one or more person-specified personal and (vi) simulated cost of living indices, respectively, and wherein the server is further adapted returns, (iii) current interest rates, (iv) simulated interest rates, (v) current cost of living indices, and interest rates include at least one of: (i) historical market returns, (ii) simulated market the future target benefit payments

- guaranteed life-dependent retirement benefit corresponding to the total current value towards purchasing a remainder of the at least first allocation period and accelerating the allocation period by allocating at least a portion of funds information received from the least one remote client computer related to acceleration of the (Previously Presented) The method of claim 80, further comprising processing
- available guaranteed life-dependent retirement benefits at one or more selected intervals of the at vehicle towards gradually purchasing one or more fractions of at least one of a plurality of simulated results of allocations of portions of funds corresponding to the at least one asset more choices specified by the person and (ii) one or more modifications to a sample retirement plurality of sample retirement benefit programs in accordance with at least one of: (i) one or least the remote client computer. least one of a plurality of available allocation periods, and providing the simulated results to at benefit program specified by the person, each sample retirement benefit program including (Previously Presented) The method of claim 80, further comprising simulating
- interest rates and at least one of: (i) information related to projected morbidity of the person; and calculating statistically simulated purchase prices by employing information related to simulated (ii) information related to projected longevity of the person more selected intervals of the at least one available allocation period, and further comprising include simulated total current values and simulated target benefit payment values for the one or (Previously Presented) The method of claim 85, wherein the simulated results
- simulated results includes calculating the simulated results as a function of at least one of: (i) (Previously Presented) The method of claim 85, wherein calculating the

of the at least one available allocation period. inflation rates, and further comprising statistically calculating at least one probability of achieving the at least one available guaranteed life-dependent retirement benefit at an expiration simulated market performance information, (ii) simulated interest rates, and (iii) simulated

- rejection by the person of the one or more modifications, and (iii) information related to one or comprising recalculating the simulated results in accordance with the one or more modifications more modifications to the sample benefit program specified by the person, and further related to acceptance by the person of the one or more modifications; (ii) information related to least the remote client computer to provide information related to at least one of: (i) information (Previously Presented) The method of claim 85, further comprising querying at
- related to acceptance by the person of the one or more modifications allocation of funds in accordance with the simulated results in response to receiving information (Previously Presented) The method of claim 85, further comprising altering the
- one response the person provides to querying towards implementing the retirement benefit personal choices of the person related to the retirement benefit program, and processing at least and age of the person's spouse, if any, (v) health status of the person, and (vi) one or more person, (iv) one or more personal financial assets owned by the person, (iv) age of the person, more of a plurality of available allocation periods the person desires, (iii) a risk tolerance of the plurality of available guaranteed life-dependent retirement benefits the person desires, (ii) one or least the remote client computer to provide information of at least one of: (i) one or more of a (Previously Presented) The method of claim 80, further comprising querying at
- least first guaranteed life-dependent retirement benefit purchased each of future intervals of the allocation period includes performing actuarial valuations of the at value of the at least first guaranteed life-dependent retirement benefit as of a current date and for (Previously Presented) The method of claim 80, wherein calculating the current

- representative of the person, and (iii) an advisor of the person. computer includes a remote computer operated by at least one of: (i) the person, (ii) a 92. (Previously Presented) The method of claim 80, wherein the remote client
- computer is operatively connected to at least one computing device operated by the person. (Previously Presented) The method of claim 80, wherein the remote client
